

Acetamiprid Mitigation Plan

Acetamiprid is a broad-spectrum cyano-substituted neonicotinoid insecticide registered for use against a wide variety of insects including ants, termites, cockroaches, aphids, whiteflies, thrips, codling moth, aphids, and stinkbugs. It is used in both residential and agricultural, and indoor and outdoor settings. It is applied to foliage and soil or as a seed treatment, bait, stickers, or barrier treatment for termites.

Acetamiprid Risks of Concern Summary for Risk Mitigation Peer Review (Scheduled for 5/14/19)
